### React JS를 사용하기 위한 준비

```
<script src="https://unpkg.com/react@17/umd/react.production.min.js"></script>
<script src="https://unpkg.com/react-dom@17/umd/react-dom.production.min.js"></script>
<script src="https://unpkg.com/babel-standalone@6.15.0/babel.min.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></scri
```

01 JSX : script안에서 작성(html비슷하지만 html은 아님, 단독태그끝에 /넣어야함)

```
<div>
    <br />
 </div>
02 ReactDom.render() : JSX요소나 컴포넌트를 마운트요소에 출력
 ReactDOM.render(
    JSX요소 또는 <컴포넌트 />, 마운트요소
 );
03 컴포넌트
 class 컴포넌트명(첫글자대문자) extends React.Component {
    render(){ return( <div>JSX작성</div> ) }
```

# 04 스테이트/함수/생명주기

}

#### class 컴포넌트명(첫글자대문자) extends React.Component {

```
constructor(props){
        super(props);
        this.state = { 스테이트명:0 }; //스테이트는 변수는 아닌데 변수비슷한거
        this.함수 = this.함수.bind(this);
  }
  함수명(){
        this.setState({
               스테이트: this.state.스테이트 + 1
        });
  }
  componentDidMount(){
        alert("컴포넌트가 마운트된후 실행");
  }
  componentDidUpdate(){
        alert("컴포넌트가 업데이트된후 실행");
  }
render(){ return(<div>JSX작성</div>) }
```

# 05 속성(props)

## 06 이벤트

```
<JSX태그 on이벤트={ this.함수명 }>
<JSX태그 on이벤트={ function(){할일} }>
<JSX태그 on이벤트={ ()=>{할일} }>
```

onClick // 클릭했을때

onMouseOver // 오버했을때

onMouseOut // 아웃했을때
